Course outline

Do you regularly meet decision-makers? The course is a blend of theory and practice, and is designed for non-academics who will design and oversee impact evaluations in developing countries.

Course participants will learn about attribution, control groups, and sampling. They will review global findings from randomised and other evaluations. They will also develop their own evaluation designs, which they will test in a field visit to rural households. Practical skills will be covered, such as good questionnaire design, drafting evaluation terms of reference and the management of surveys.

Who will benefit the most?

This course is specifically relevant if you are:

- Involved in formulating, managing or monitoring interventions and /or prepare, supervise or participate in impact evaluations;
- A desk officer, programme manager or task manager;
- Working for a national or local government, an international donor agency or an NGO

If you are actively involved in evaluation designs, we encourage you to bring one of your projects with you, so you get hands-on help drafting a Terms of Reference (TOR), questionnaires and so on.

No prior economic or statistical knowledge is required to join this course.
