Supported by:

Decentralised Wastewater Management - Experience with Long-Term Operations

International Conference and Poster Exhibition

Hanoi / Vietnam
12. and 13. October 2017

Rationale

Decision makers in many developing and emerging countries are currently considering Decentralized Wastewater Treatment (DWWT) as a cost-effective alternative to central, conventional drainage and treatment concepts. International development banks are increasingly ready to promote and finance this development. However, long-term operational experience has rarely been communicated so far, particularly with regards to financial sustainability and technical management issues.

Admission is free of charge

Objectives

The 2-day-conference (including a field trip) is supposed to

- Present long-term operating experience with decentralized systems and concepts, and share typical challenges, shortcomings and respective solutions
- Provide a forum for discussion between international experts
- Promote international networking on "decentralized wastewater treatment"
- Promote the exchange of experiences between countries embarking on the concept of decentralised sanitation

Key Speakers / Presentations / Field Trip

- Vietnam's Ministry of Construction
- Vietnam Water and Sewerage Association
- Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ)
- Tilia GmbH
- BORDA e.V.
- Helmholtz Centre for Environmental Research UFZ
- Water Solutions International e.V.
- Training and Demonstration Centre for Decentralised Sewage Treatment - BDZ e.V.
- ...and many more!

Half – day field trip and visit to decentralized wastewater treatment plants in Bac Ninh City on Day 2
